

C-VERIKIT

Temperature Verification Kit for Celsius Instruments

PRODUCT DESCRIPTION

Molins Langen presents the Celsius instruments verification kit. The Celsius temperature measurement instruments require verification as part of day to day operations. This is to ensure that the instrument's calibration is valid. The verification kit (C-Verikit) is the recommended tool to perform this task and comes with full manufacturer's warranty, service and support.

C-Verikit is a complete turnkey solution that is easy to use and prevents the use of open liquid containers that are prone to spillage and other logistical complications. It consists of sealed liquid containers and a calibrated temperature probe and indicator.

The C-Verikit liquid containers are normally placed in a temperature controlled environments and left to acclimatise (Typically 12 hours). This temperature is normally within the customer's acceptance range for the measured produce. Agreement between the probe temperature and Celsius instruments within 0.5 °C constitutes a pass. In case of verification failure, the user needs to check door seal, check cavity and contact a Molins Langen service engineer if necessary.

The customer is responsible for maintaining records and compliance with regulatory requirements that pertain to their procedures and uses of the instrument. C-Verikit provides the assurance that the Celsius instruments are working optimally at all times; It includes all the necessary components in one box. The probe calibration is included in the yearly service whereby it is swapped for a calibrated one.

FEATURES

- Complete verification kit in one box
- Traceable Calibrated probe
- Improved Compliance hence peace of mind
- Step by step instructions
- Safety documentation included
- Suitable for Chilled and frozen
- Replacement Monopropylene glycol available separately
- Temperature probe instrument calibration service available

TECHNICAL SPECIFICATION

Kit Components	Quantity
1 litre sealed container prefilled with Monopropylene glycol.	2
MSDS for Monopropylene glycol.	1
Pair of gloves for protection and to minimise heat transfer).	1
Calibrated precision thermometer probe (0.1 deg C accuracy).	1
Thermometer display indicator.	1
Instruction Manual	1
Compartmentalised Plastic case	1

TO ORDER Please contact your Molins Sales Manager for further details
